

Efflutrack Functionality Self Checklist

No Confirmation from irrigator:

- Is the system switched on correctly at both the irrigator and the pump?
- Is the cable anchored properly?
- Does the cable have enough tension?
- Have any magnets fallen off? Are all of the magnets in the correct place?
- Have the magnets eroded?
- Is the magnet reader positioned correctly and aligned with the magnets?
- Is there enough pressure coming from the pump to generate movement?
- Is the irrigator in a paddock that has unreliable cell phone coverage?

Irregular irrigator run time:

- Is the system correctly switched on at both the irrigator and the pump?
- Do the batteries have enough power left?
- Have any magnets fallen off? Are all of the magnets in the correct place?
- Have the magnets eroded?
- Is the magnet reader positioned correctly and aligned with the magnets?
- Is the irrigator in a paddock that has unreliable cell phone coverage?
- Is the irrigator moving at speed?

Pump not switching on:

- Is the pump unit correctly switched on?
- Do you have a float switch? If so is there enough effluent in your pond that it is switched on?
- Does your pump unit have surge protection? If not have you had any power surges that may have damaged the unit?
